U.S. Patent and Trademark Office PTOL-303 (Rev. 11-03) Continuation of 10. Other: Claims 7-18 would continue to be rejected over either Saka et al., or Bugg in view of Silenius et al., as presently pending. Applicant argues that this combination is overcome by their showing of synergistic unexpected results, however, the Examiner would disagree and point out that the applied references teach applications utilizing the same concentrations in solution. The combination of the siloxane and complexing agent allow for a lower application amount because the siloxane acts to retain the complexing agent from washing out, without requiring an overloading treatment application of the complexing agent. The "deep" or overloading treatment of Silenius was to account for wash out. The combination of the binding siloxane and the complexing agent is synergistic but not unexpectedly so, because their individual characteristics are retained, while being complimented by the activity of the other component.
